Enterprise Network and Internet Connectivity Solutions

We offer a wide range of IT services, ranging from network infrastructure to Web server deployment. Our expertise and years of experience means you will get top-notch service and support at a competitive price.

Our services include:

Local Area Networks (LANs)

The most basic building block of enterprise networks, LANs are absolutely essential in any modern business. Our expertise in building and maintaining LANs means you will get a fast, reliable, and integrated network on which to run your mission-critical applications.

Network Servers

One of the most widely used applications of LANs is to provide access to shared data storage and printers. We have what it takes to set up fast and reliable file and print servers accessible to Unix, Microsoft Windows, and Apple Macintosh systems. We are also highly qualified in set-up of e-mail, Web, Unix shell, and LDAP servers, also easily accessible to Unix, Microsoft Windows, and Apple Macintosh systems.

Workstations

We have the skills required to build, configure, and deploy anything from inexpensive PCs to fast workstations, using the Linux, Microsoft Windows, and Apple Macintosh platforms.

Internet Access

Access to the Internet is essential to do business in the fast-paced, competitive environment of today. TeamCluster stands ready to provide your business with the Internet access that fits your needs, from inexpensive dial-up to high-speed broadband connections over DSL, cable, or T1/T3 lines.

Consulting Services

TeamCluster provides expert consulting services for network design, technology implementation, vendor selection, custom solutions development, and systems management. We have the know-how ranging from LAN and WAN connectivity design,
